

### SMS alert and notification

Mobifi's SMS Alert allows you to send SMS text messages to system administrators and network support staff with system alerts, notifications and critical information. It can also be used to send SMS notifications direct from programs to provide order confirmation, proof of delivery, mobile tokens and simple SMS marketing campaigns. The service can be used in many business scenarios and is presently deployed by many organisations for a number of purposes.

Mobifi's SMS Alert is an Email to SMS product which can compliment many of your existing systems or services and enhance the flow of communication and information through your organisation. For example, if you have an existing network monitoring application that sends emails to alert support teams or engineers of system errors, then Mobifi's Alert solution is the ideal product to mobile-enable this critical part of your business.

#### What does it do?

Our advanced SMS messaging Gateway converts email to SMS and SMS to email and can be used with any email generating system. To send an SMS text message from your monitoring system you simply enter the mobile phone number in the following format:

**<mobnumber>@sms.mobifi.com**

This service allows you to send and receive SMS messages via any number of different systems including:

- email
- databases
- internet & intranets
- information servers
- systems monitoring applications
- software programs

## What does it offer?
